DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4,9-13, 17 , drawn to a method which corrects a 3-dimensional CT data value obtained from a 3-dimensional object , classified in class 382, subclass 131.
 - II. Claim 5-6, 14-15 drawn to a method which processes 3-dimensional CT data obtained from a 3-dimensional with respect to upper rank integrated value , classified in class 382, subclass 274.
 - III. Claims 7 and 16 drawn to a method which processes 3-dimensional CT data obtained from a 3-dimensional with respect to upper rank and lower rank, classified in class 382, subclass 104.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as a correcting step of correcting the 3-dimensional CT data value by using the threshold value set in the threshold setting step and the average value obtained in the average calculation step. , subcombination III has separate utility such

as correction step of correcting a currently observed 3-dimensional CT data element based on the sum of the predetermined number of upper-rank integrated values and the sum of the predetermined number of lower-rank integrated values; and a judgment step of comparing the corrected 3-dimensional CT data element obtained in the correction step with a predetermined threshold value. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
